Agricultural burned area / Thailand / 2023–2026

Crop residue burning in each region

26.0

million rai burned — Thailand, 2026

Highest on record

North

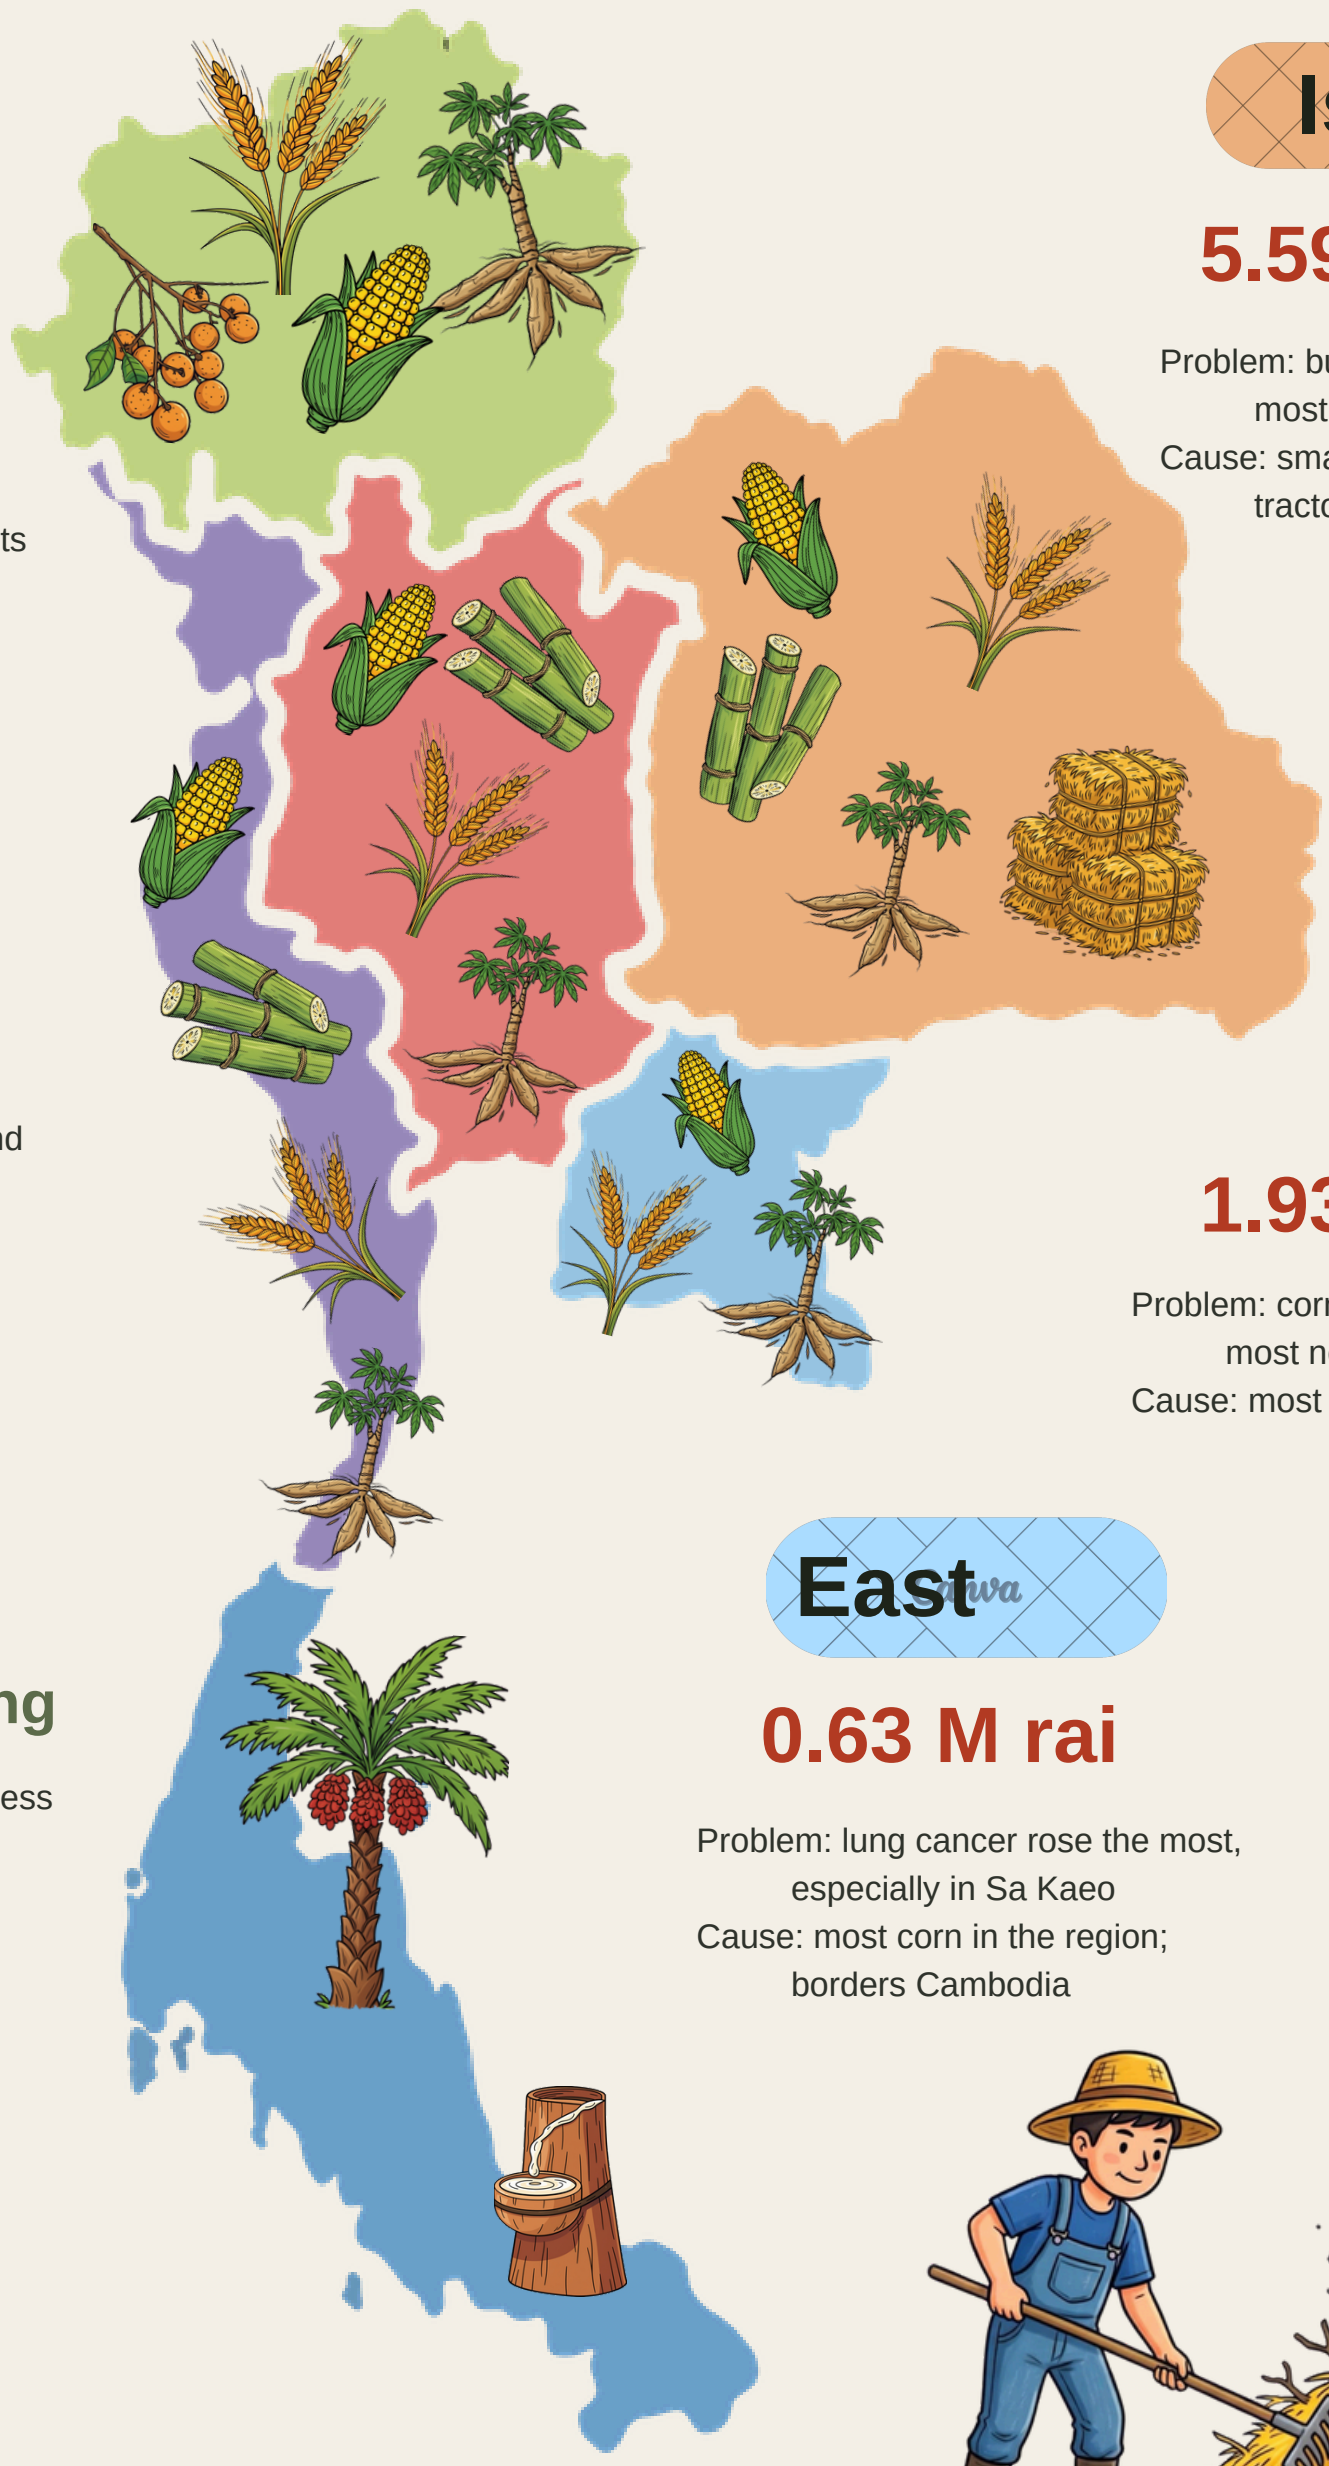

16.17 M rai

Problem: largest burned area; top lung-cancer rate
Cause: burning farms and forests

Isan

5.59 M rai

Problem: burned area grew the most; most patients nationwide
Cause: smallholders can't afford tractors to plough it in

West

1.65 M rai

Problem: rice burning up 40×; Phetchaburi up 3,004%
Cause: more burning of rice and other farmland

Central

1.93 M rai

Problem: corn burning up 760%; most new respiratory cases
Cause: most rice burning (1.9 M rai)

South

Almost no burning

Problem: highest respiratory illness rate per person
Cause: haze from peat fires in Indonesia

East

0.63 M rai

Problem: lung cancer rose the most, especially in Sa Kaeo
Cause: most corn in the region; borders Cambodia

Rai Mai Phao Station
A village processing hub

≈ 2 rai

Works like a gas station

About the size of a PTT gas station (≈ 0.3 ha)

Station concept rendering — numbers on the image match the labels

Why a station?

- Close to farms: cheap hauling
- Big enough to share machines
- Transparent weighing
- Pool lots, sell in bulk
- Store stock across seasons

01	02	03	04	05
Book a pickup via LINE	Village pickup truck collects	Weigh, photo & moisture check at the station	Process at the machine	**Farmer chooses** • Consign • Sell to us • Take home

Scale-up

Start with one 3-in-1 machine per village → add more as supply grows
